25X1A

5. It was observed for the first time that 16 twin-engine low-wins monoplanes (double, oval-shaped rudger assembly, compit on top of fuselage with armament first, to the rear) landed at the sirfield.

## 7 September 1943

7. All Th-los were transferred but the twin-engine aircraft were still parked at the field. According to airfield workers, other u its were enjected to arrive. Quarterin and parking facilities were already provided. Expension work was being done in the western section of the field.

25X1A Consent:

a. According to the above information,

the round attack unit was apparently transferred from the COTTEUS airfield in late August 1949. A consense unit of the III har Comps (determined from the Tourne attack unit was transferred to other reports, the round attack unit was transferred to London 1772 and SCOTE.

b. This is the first information on expansion work on the western edge of the COTTEUS airfield. As work was probably due to the arrival of boomer aircraft.

c. The aircraft type reproduced on the attached sketch is obviously an la-10. It is again confirmed that the ground attack unit previously stationed in COTTEUS is equipped with La-10s.

1 Annex: Fround Attack Aircraft Observed at the COTTE IS airfield. 25X1A
